VWRefresh

Project Description:

VWRefresh, a comprehensive HRMS and employee self-service platform covering the full employee lifecycle. Delivered modules for employee profile, leaves, expenses, travel, helpdesk, confirmation, separation, PMS, and timesheets, along with appraisal and reporting workflows. Implemented SISO-based secure login, unified dashboards, approval workflows, and employee notifications. Enabled advanced employee search, configurable reports, and automated HR/finance processes. Improved operational efficiency by digitizing manual tasks and enhancing employee experience across all HR functions.

This is an internal project of V2 built using **Angular 9 now getting upgraded to Angular 18**.

Environment: ***Angular 9, SQL Server***

Angular Product Catalog – POC
Tech Stack: Angular, TypeScript, HTML, CSS
Architecture: Component-based architecture with service-driven data handling and routing

The primary goal of this Proof of Concept (POC) is to demonstrate core Angular features required for scalable web application development, including:

- Component-based UI development
- Centralized data management using Services
- Navigation using Angular Router
- Dynamic routing with parameters
- Data sharing between components

The application is a simple Product Catalog System where users can:

- View a list of available products
- Click on any product to view more detailed information
- Navigate between pages without page refresh (SPA behavior)

This POC simulates a real-world e-commerce structure using dummy local product data. It is designed to be easily extendable for APIs, database integration, authentication, and state management.
